

LAMIS SAIDI

Test & Validation Engineer · Test Automation · Embedded Software

ls.lamissaidi@gmail.com | +216 28 858 523 | Ariana, Tunisia | linkedin.com/in/lamis-saidi

PROFILE

Computer engineer with 2+ years validating safety-critical embedded systems in aerospace and automotive. I build test automation in Python and Robot Framework, write drivers for low-level communication protocols, and develop C++/Qt tooling for automated test benches. ISTQB Foundation Level v4.0 certified, comfortable owning validation end to end — from requirements review and test design to defect root-cause analysis and client reporting.

PROFESSIONAL EXPERIENCE

SERMA International — El Ghazela Technopark, Ariana, Tunisia

Test Automation Engineer — Embedded Systems | Aerospace Department Aug 2026 – Present

- Design, write and execute functional and system-level test cases (PBIT, CBIT, IBIT) in Python and Robot Framework on embedded Linux equipment.
- Develop Python drivers for communication protocols and API-based test interfaces, increasing automated execution coverage and reducing post-release defects.
- Review system requirements (SRD) against test scenarios to guarantee full requirements and test coverage.
- Apply black-box and white-box techniques; analyse results, investigate failures and drive anomalies to closure with development and validation teams.
- Execute User Acceptance Testing and configure eMMC-based embedded Linux targets for validation campaigns.

Technologies: Python · Robot Framework · Embedded Linux · ARINC · CAN · UART · SPI · RS-232/RS-485 · Digilent Digital Discovery · WaveForms SDK/API

Embedded Software Engineer Apr 2026 – Present

- Build a C++/Qt desktop application to drive an automated test bench, integrating 15+ Acceptance Test Procedures and validating their execution and performance.
- Developed Python drivers to control and automate lab instrumentation: power supplies, multimeters, calibrators and NI-9474 relay switching.
- Automated Acceptance Test Result (ATR) generation with a Python reporting script, eliminating manual report writing.
- Ran integration, system and acceptance testing on the delivered bench.

Technologies: C++ · Qt Creator · Python · Visual Studio · NI-9474 · Power supplies · Multimeters · Calibrators · Relay switches

Automotive Audio Test & Validation Engineer | Client: Renault Alliance Mar 2025 – Apr 2026

- Configured and tested Hardware-in-the-Loop A-IVI infotainment systems using Vector CANalyzer and CAPL over CAN.
- Executed functional, non-functional, regression, non-regression, performance and stress campaigns; validated Apple CarPlay, Android Auto and ADAS functionalities.
- Analysed audio quality and system behaviour with R&S® UPP and reported release-level audio status to the client at every sprint end.
- Designed and executed test cases in CodeBeamer and Silk Central; created and maintained 10–15 bug tickets, test tickets and user stories per month in Jira with SQL-based dashboards.
- Coordinated the audio validation team — distributed testing tasks, onboarded and trained new members, and represented validation in client requirement and release meetings.

Technologies: Vector CANalyzer · CAPL · HIL · Automotive ECU · CAN · Jira · SQL · CodeBeamer · Silk Central · R&S® UPP · Agile

End-of-Studies Internship — Test Automation Feb 2024 – Aug 2024

- Developed a Python application that generates automotive test scenarios from a unit-test database and runs them sequentially with configurable repetitions, exporting detailed reports without human intervention — letting non-developers create and execute tests.

TECHNICAL SKILLS

Languages	Python · C · C++ · CAPL · Java · VHDL · SQL
Test automation	Robot Framework · Python drivers · Vector CANalyzer / CAPL · WaveForms SDK/API · automated reporting
Testing	Functional · Regression & non-regression · Performance · Stress · UAT · System & integration · Black-box · White-box · Exploratory · HIL
Tools & ALM	Jira (SQL dashboards) · CodeBeamer · Silk Central · Qt Creator · Visual Studio · STM32CubeIDE · LabVIEW · Quartus · Arduino IDE
Embedded	Embedded Linux · eMMC · STM32 · Raspberry Pi · ESP32 · Arduino · NI boards · Digilent Digital Discovery
Protocols	CAN · ARINC · UART · SPI · I ² C · RS-232 / RS-485 · TCP/IP · MQTT
Instrumentation	R&S® UPP audio analyser · programmable power supplies · multimeters · calibrators · relay switching
Methods	Agile / Scrum · requirements & test-coverage analysis · root-cause analysis · team coordination & training · client communication

EDUCATION

Engineering Degree in Computer Science — Embedded Systems 2021 – 2024

ESPRIT, Privative Higher School of Engineering and Technology — Ariana, Tunisia

Preparatory Cycle for Engineering Studies — Technology 2018 – 2021

IPEIEM, Preparatory Institute for Engineering Studies of El Manar — Tunisia

CERTIFICATIONS

ISTQB® Certified Tester — Foundation Level (CTFL) v4.0 — ISTQB	05/2026
Applications of AI for Anomaly Detection — NVIDIA Deep Learning Institute	11/2023
Applications of AI for Predictive Maintenance — NVIDIA Deep Learning Institute	11/2023

LANGUAGES

Arabic — Native · English — Professional (B2) · French — Professional (B2)
